

# Managing **PSORIATIC ARTHRITIS** in Specialty Practice: *New Therapies, Guidelines and Treatment Targets During the COVID-19 Pandemic*

**FRIDAY  
JANUARY 29, 2021**

**FACULTY**

**Daniel Furst, MD**

Professor of Rheumatology and Medicine  
University of California, Los Angeles, CA  
University of Washington, Seattle, WA  
University of Florence, Florence, Italy

*This activity is provided by Med Learning Group.  
This activity is co-provided by Ultimate Medical Academy/Complete Conference Management (CCM).*

*This activity is supported by an educational grant from Lilly.*

***The RELIEF Initiative***  
***Managing Psoriatic Arthritis in Specialty Practice:***  
***New Therapies, Guidelines and Treatment Targets During the COVID-19 Pandemic***

**FACULTY**

**Daniel E. Furst, MD**

Professor of Rheumatology and Medicine  
University of California, Los Angeles, CA  
University of Washington, Seattle, WA  
University of Florence, Florence, Italy

**PROGRAM OVERVIEW**

This case-based live virtual activity will cover the treatment and management of patients with psoriatic arthritis.

**TARGET AUDIENCE**

This activity is intended for rheumatologists and rheumatology advanced practice providers (NPs and PAs) who are involved in the care and treatment of patients with psoriatic arthritis.

**Learning Objectives**

- Identify the risk of COVID-19-related infections in PsA, along with their impact on therapeutic choice
- Pursue strategies to optimize PsA therapy in the COVID-19 era while minimizing risks and adverse events
- Assess methods for better evaluating and communicating with patients through telemedicine and virtual platforms
- Apply new ways to initiate and manage PsA treatment, monitor PsA disease progression and address adverse events via virtual communication

**ACCREDITATION STATEMENT**

Med Learning Group is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

This CME activity was planned and produced in accordance with the ACCME Essentials.

**CREDIT DESIGNATION STATEMENT**

Med Learning Group designates this live virtual activity for a maximum of 1.0 *AMA Category 1 Credit*<sup>™</sup>. Physicians should claim only the credit commensurate with the extent of their participation in the live virtual activity.

**NURSING CREDIT INFORMATION**

Purpose: This program would be beneficial for nurses involved in the care of patients with psoriatic arthritis.

**CNE Credits:** 1.0 ANCC Contact Hour.

**CNE ACCREDITATION STATEMENT**

Ultimate Medical Academy/CCM is accredited as a provider of continuing nursing education by the American Nurses Credentialing Center's Commission on Accreditation. Awarded 1.0 contact hour of continuing nursing education of RNs and APNs.

## **ABIM Maintenance of Certification**

Successful completion of this CME activity, which includes participation in the evaluation component, enables the participant to earn up to 1.0 Medical Knowledge MOC point in the American Board of Internal Medicine's (ABIM) Maintenance of Certification (MOC) program. It is the CME activity provider's responsibility to submit participant completion information to ACCME for the purpose of granting ABIM MOC credit.

## **DISCLOSURE POLICY STATEMENT**

In accordance with the Accreditation Council for Continuing Medical Education (ACCME) Standards for Commercial Support, educational programs sponsored by Med Learning Group must demonstrate balance, independence, objectivity, and scientific rigor. All faculty, authors, editors, staff, and planning committee members participating in an MLG-sponsored activity are required to disclose any relevant financial interest or other relationship with the manufacturers of any commercial products and/or providers of commercial services that are discussed in an educational activity.

## **DISCLOSURE OF CONFLICTS OF INTEREST**

**Daniel E. Furst, MD**, is on the speakers' bureau for CME. He also serves as a consultant for Actelion, Amgen, BMS, Corbus, Galapagos Novartis, and Pfizer. He has also provided grant/research support for Actelion, Amgen, BMS Corbus, Galapagos GSK, NIH, Novartis, Pfizer, Sanofi, and Roche/Genentech.

## **CME Content Review**

The content of this activity was independently peer-reviewed.

The reviewer of this activity has nothing to disclose.

## **CNE Content Review**

The content of this activity was peer-reviewed by a nurse reviewer.

The reviewer of this activity has nothing to disclose.

The staff, planners and managers reported the following financial relationships or relationships to products or devices they or their spouse/life partner have with commercial interests related to the content of this CME/CE activity:

- Matthew Frese, General Manager of Med Learning Group, has nothing to disclose.
- Christina Gallo, SVP, Educational Development of Med Learning Group, has nothing to disclose.
- Ana Maria Albino, Senior Program Manager of Med Learning Group, has nothing to disclose.
- Diana Tommasi, Medical Director of Med Learning Group, has nothing to disclose.
- Lauren Welch, MA, VP of Accreditation and Outcomes of Med Learning Group, has nothing to disclose.
- Brianna Hanson, Accreditation and Outcomes Coordinator of Med Learning Group, has nothing to disclose.

## **DISCLOSURE OF UNLABELED USE**

Med Learning Group requires that faculty participating in any CME activity disclose to the audience when discussing any unlabeled or investigational use of any commercial product or device not yet approved for use in the United States.

During this lecture, faculty may mention the use of medications for both FDA-approved and non-approved indications.

## METHOD OF PARTICIPATION

There are no fees for participating and receiving CME/CE credit for this live virtual activity. To receive CME/CE credit participants must:

1. Read the CME/CNE information and faculty disclosures.
2. Participate in the live virtual activity.
3. Submit the evaluation form to Med Learning Group.

You will receive your certificate upon completion as a downloadable file.

## DISCLAIMER

Med Learning Group makes every effort to develop CME activities that are science-based. This activity is designed for educational purposes. Participants have a responsibility to use this information to enhance their professional development in an effort to improve patient outcomes. Conclusions drawn by the participants should be derived from careful consideration of all available scientific information. The participant should use his/her clinical judgment, knowledge, experience, and diagnostic decision-making before applying any information, whether provided here or by others, for any professional use.

For CME questions, please contact Med Learning Group at [info@medlearninggroup.com](mailto:info@medlearninggroup.com)  
Contact this CME provider at Med Learning Group for privacy and confidentiality policy statement information at [www.medlearninggroup.com/privacy-policy/](http://www.medlearninggroup.com/privacy-policy/)

## AMERICANS WITH DISABILITIES ACT

Staff will be glad to assist you with any special needs. Please contact Med Learning Group prior to participating at [info@medlearninggroup.com](mailto:info@medlearninggroup.com)

This activity is provided by Med Learning Group.

This activity is co-provided by Ultimate Medical Academy/Complete Conference Management (CCM).

Supported by an educational grant from Lilly.

## AGENDA

### Introduction/Background

- Epidemiology and pathophysiology
- COVID-19 background
- COVID-19 and rheumatology: implications for assessment and evaluation
- Disease domains and joint manifestations
- Identification and diagnosis

### Medical Management of PsA in the COVID-19 Era

- 2019 ACR guidelines and their application to practice
- Therapeutic considerations in COVID-19
- Conventional agents
- Biologics, small molecules:
  - Inhibitors of TNF, IL-12/23, IL-17A, IL-23, phosphodiesterase 4, T cell costimulation, and janus kinases
- Evolving standards of treatment in the COVID-19 era
- Treating-to-target: establishing goals of therapy

### Telemedicine and Patient Considerations in the COVID-19 Pandemic

- Early diagnosis and initiation of treatment for long-term success
- Effect of management decisions on patient QoL
- Lowering disease burden (personal, societal, economic) through effective treatment
- Telemedicine: the changing face of rheumatology consults during the pandemic
- Case Study(s)

### Conclusions and Q/A

# *Managing Psoriatic Arthritis in Specialty Practice: New Therapies, Guidelines and Treatment Targets During the COVID-19 Pandemic*

**Daniel E. Furst, MD**

Professor of Rheumatology  
University of California in Los Angeles  
University of Washington, Seattle, Washington  
University of Florence, Florence, Italy

2

## **Disclosures**

- Dr. Furst reports that he is on the speakers' bureau for CME. He also serves as a consultant for Actelion, Amgen, BMS, Corbus, Galapagos Novartis, and Pfizer. He has also provided grant/research support for Actelion, Amgen, BMS Corbus, Galapagos GSK, NIH, Novartis, Pfizer, Sanofi, and Roche/Genentech.
- During the course of this lecture, Dr Furst will discuss the use of medications for both FDA-approved and non-approved indications

**This educational activity is supported by an educational grant from Lilly.**

3

## Learning Objectives

- Identify the risk of COVID-19-related infections in psoriatic arthritis (PsA), along with their impact on therapeutic choice
- Pursue strategies to optimize PsA therapy in the COVID-19 era while minimizing risks and adverse events
- Assess methods for better evaluating and communicating with patients through telemedicine and virtual platforms
- Apply new ways to initiate and manage PsA treatment, monitor PsA disease progression and address adverse events via virtual communication

4

## COVID-19-associated Hyperinflammation

- Clinical deterioration in COVID-19 often occurs 7-10 days after symptom onset when viral titres decline
  - Pathology likely driven by inflammation rather than direct viral injury
- Elevated inflammatory markers in COVID-19 patients are significantly associated with risk of next-day escalation of respiratory support or death (HR, 2.24)

Manson JJ, et al. *Lancet Rheumatol.* 2020;2:e594-e602. Yang L, et al. *Signal Transduct Target Ther.* 2020;5:128.

5

## Concerns During the COVID-19 Pandemic

- Patients with **PsA are not at increased risk of death, invasive ventilation, ICU admission, or serious complications from COVID-19**

– Impact of PsA therapies on COVID-19 disease severity is unknown

- Risk of poor outcomes from COVID-19 appears to be related primarily to general risk factors such as age and comorbidities

Mortality in an Observational Study of COVID-19 Cases in China (n = 72,314)

Characteristics	Deaths (%)
All confirmed cases	2.3
• Critical cases	49.0
• ≥80 years of age	14.8
• Cardiovascular disease	10.5
• 70-79 years of age	8.0
• Diabetes	9.2
• Chronic respiratory disease	8.0
• Hypertension	6.0
• Cancer	7.6

**Conclusion: Increased % with age ≥ 70 yrs, lung disease, CV/HBP, Diabetes, cancer**

Mikuls TR, et al. *Arthritis Rheumatol.* 2020;72:1241-1251. Pablos JL, et al. *Ann Rheum Dis.* 2020;79:1544-1549. Wu Z, et al. *JAMA.* 2020;323:1239-1242. Wollina U, et al. *Dermatol Ther.* 2020;33:e13743.

6

## Impact of PsA Comorbidities on COVID-19 Outcomes

- PsA is associated with a higher incidence of CV disease, metabolic syndrome, obesity, diabetes, dyslipidemia, and inflammatory bowel disease
- Risk of poor outcomes for COVID-19 appears to be related to general risk factors such as older age, male sex, and comorbidities (obesity, diabetes, hypertension, CV or lung disease)

Variable	Relative risk from COVID-19 (95%CI)		P value
	Non-rheumatic cohort	Rheumatic cohort	
Age over 60 years	1.99 (1.22, 3.20)	3.70 (2.30, 7.08)	0.841
Male sex	1.39 (1.09, 1.84)	2.16 (1.58, 2.99)	0.286
Obesity	0.72 (0.53, 1.00)	1.22 (0.95, 1.57)	0.393
Diabetes	0.53 (0.34, 0.83)	0.95 (0.74, 1.22)	0.038
Hypertension	1.07 (0.83, 1.38)	1.64 (1.27, 2.10)	0.290
CV disease	0.90 (0.68, 1.18)	1.44 (1.10, 1.88)	0.020
Lung disease	1.00 (0.78, 1.28)	1.57 (1.19, 2.06)	0.723

CV = cardiovascular; IBD = inflammatory bowel disease  
 Pablos JL, et al. *Ann Rheum Dis.* 2020;79:1544-1549.

7

## COVID-19 Treatment Modifications

Treatment of Rheumatic Disease in the Absence of COVID-19 Infection or Exposure	
HCQ/CQ, SSZ, MTX, LEF, immunosuppressants (tacrolimus, CSA, MMF, AZA), biologics, JAK inhibitors, NSAIDs	Continue therapy
Low-dose corticosteroids	May be started if clinically indicated (<10 mg prednisone equivalent/day)
Following SARS-CoV-2 Exposure	
HCQ/CQ, SSZ, NSAIDs	May be continued
Immunosuppressants (tacrolimus, CSA, MMF, AZA), non-IL-6 biologics, JAK inhibitors	Stop therapy temporarily, pending a negative COVID-19 test or 2 weeks of symptom-free observation
IL-6 inhibitors	May be continued in select circumstances
Documented or presumptive COVID-19	
HCQ/CQ	May be continued
SSZ, MTX, LEF, non-IL-6 biologics, immunosuppressants, and JAK inhibitors	Withhold or stop therapy
NSAIDs	Should be stopped in patients with severe respiratory symptoms

AZA = azathioprine; CSA = cyclosporine A; CQ = cloroquine; HCQ = hydroxychloroquine; IL = interleukin; JAK = Janus kinase; LEF = leflunomide; MMF = mycophenolate mofetil; MTX = methotrexate; NSAID = nonsteroidal anti-inflammatory drug; SSZ = sulfasalazine  
Mikuls TR, et al. *Arthritis Rheumatol.* 2020;72:1241-1251.

- All recommendations based on very low quality of evidence and moderate to high consensus
- Recommendations are for rheumatic disease in general and are not subdivided by patient disease. There are no specific recommendations for PsA.
  - May **reinitiate therapy within 7-14 days of symptom resolution** for those with mild COVID-19
  - Consider reinitiating therapy in **10-17 days after positive PCR results if asymptomatic** COVID-19
  - Timing of reinitiating therapy after severe COVID-19 should be made on case-by-case basis

8

## Corticosteroid Use During the COVID-19 Pandemic

- A case series of 600 patients found **prednisone >10 mg/day** was associated with increased odds of **hospitalization (OR, 2.05)**
- A study in patients with inflammatory bowel disease and COVID-19 found **steroids increase the risk of severe COVID-19 (aOR, 6.0)**

**Glucocorticoids should be used at the lowest possible dose to control rheumatic disease, regardless of exposure or infection status**

**Glucocorticoids should not be abruptly stopped, regardless of exposure or infection status**

OR = odds ratio; aOR = adjusted odds ratio.

Gianfrancesco M, et al. *Ann Rheum Dis.* 2020;79:859-866. Brenner EJ, et al. *Gastroenterology.* 2020;159:481-491. Mikuls TR, et al. *Arthritis Rheumatol.* 2020;72:1241-1251.

9

## Incorporating Telehealth into Your Practice

- **Schedule enough time.** Telehealth consults often take longer than expected to find the required information
- **Train staff in triaging symptom burden.** Identify patients with unstable symptoms who require an in-person appointment
- **Educate on self-management.** Patients may not come in for a follow-up appointment for weeks or months.
  - Teach about warning signs that require prompt evaluation
  - Educate about how to manage symptoms remotely
  - Ensure patients have enough medication
- **Clarify expectations** of what can or cannot be done remotely
  - Recognize patients who require in-person evaluation

Centers for Disease Control and Prevention website (<https://www.cdc.gov/coronavirus/2019-ncov/hcp/telehealth.html>). Landewe RBM, et al. *Ann Rheum Dis.* 2020;79:851-858.

11

## Strategies to Increase Telehealth Uptake

- **Use technology** that allows you to send and receive patient-reported outcomes scales
- **Prescreen patients with disease activity scales** and request in-person visit if scores are high
- **Offer flexibility** in platforms that can be used for video consultation, and non-video options to serve patients with limited technology and connectivity
- **Postpone** regular blood monitoring and face-to-face consultations in patients with stable disease and therapy without signs of drug toxicity
- **Communicate with insurers/payers** to understand availability of covered telehealth services

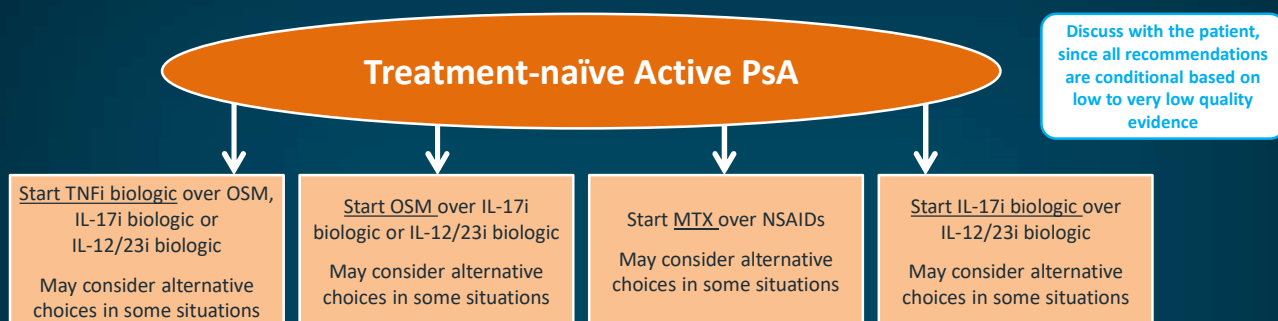

Centers for Disease Control and Prevention website (<https://www.cdc.gov/coronavirus/2019-ncov/hcp/telehealth.html>). Landewe RBM, et al. *Ann Rheum Dis.* 2020;79:851-858.

12

## Treatment Options

13

## Initiating Therapy

- Contraindications to TNFi include congestive heart failure, previous serious infection, recurrent infections, or demyelinating disease
- An OSM (MTX, SSZ, LEF, CSA, or APR) may be considered if disease is not severe, oral therapy is preferred, or patient does not want to start a biologic

APR = apremilast; CSA = cyclosporine; IL = interleukin; LEF = leflunomide; MTX = methotrexate; NSAID = nonsteroidal anti-inflammatory drug; OSM = oral small molecule; SSZ = sulfasalazine; TNFi = tumor necrosis factor-alpha inhibitor.  
Singh JA, et al. *Arthritis Rheumatol.* 2019;71:5-32.

14

## Methotrexate Is Not a DMARD in PsA

- 6-month DBRCT of MTX 15 mg/week vs PBO
- Primary outcome: PsARC  
Secondary outcomes: ACR20, DAS28, global and skin scores
- No difference in SJC, TJC, CRP/ESR, PsARC, ACR20, DAS28 at 3 and 6 months
- Patient, MD global, and skin scores significantly improved at 6 months ( $P=0.01, 0.02, 0.02$ )

Despite issues with study design, MTX does not have disease-remitting properties.

CRP = C-reactive protein; DBRCT = double-blind, randomized controlled trial; ESR = erythrocyte sedimentation rate; MTX = methotrexate; PBO = placebo; PsARC = PsA response criteria; DAS = Disease Activity Score; SJC = swollen joint count; TJC = tender joint count. Kingsley GH, et al. *Rheumatology (Oxford)*. 2012;51:1368-1377.

15

## CSA in Psoriasis and PsA

- CSA 2.5-5 mg/kg/day yielded PASI75 response in 28% to 97% of patients
- Remission could be maintained at CSA dose of at least 3mg/kg/day
- More than 50% of patients treated with CSA may have an increase in serum creatinine value >30% of baseline if treatment is prolonged for 2 years

24 Week Randomized Open NSAID\* Controlled Study of Cyclosporin A in PsA (N=99)

	P-value	Significance CSA vs NSAID*
ACR50	0.02	+
ACR70	0.05	+
Swollen Joint Count	0.05	+
Tender Joint Count	0.01	+
Pain	0.002	+
Patient Global improved $\geq 1$ point	0.04	+
MD Global improved $\geq 1$ point	0.01	+

\*NSAID +/- prednisone 5 mg daily +/- analgesics

Salvanarani C, et al. *J Rheum*. 2001;28:2274-2282. Maza J-H, et al. *JEADV*. 2011;25(2):19-27.

16

# Adalimumab Or Cyclosporine as Monotherapy or Combination For Severe PsA: A Prospective, 12-month, Observational Study

- A 12-month, observational study of 170 TNFi- and cyclosporine-naïve patients
- Patients who received adalimumab (40mg Q2W) (n=57), cyclosporine (2.5-3.75 mg/kg/day) (n=58), or their combination (n=55)
- MTX-IR (25 mg weekly or less, for a minimum of 6 months)
- Assessments: 0.5, 1, 2, 3, 4, 5, 6, 8, 10, and 12 months
- **Combination therapy improved PASI50 response rates but NOT beyond the effect of cyclosporine monotherapy (not shown)**

MTX-IR = methotrexate inadequate response  
 Karanikolas GN, et al. *J Rheumatol.* 2011;38:2466-2474.

17

# Current and Novel Treatment Options for PsA Treatment

Adapted from Nestle FO, et al. *N Engl J Med.* 2009;361:496-509. Kopf M, et al. *Nat Rev Drug Discov.* 2010;9:703-718. Garber K. *Nat Biotechnol.* 2011;29:563-566. Thanks to Iain McInnes.

18

19

20

## Anti-TNFs in PsA: Additional Outcomes

- **Enthesitis: ~60–75% improvement**
  - Assessment methods evolving: 4-point, MASES, Leeds, SPARCC
- **Dactylitis: ~60% improvement**
  - Assessment methods evolving: count, score, Leeds dactylometer
- **Function**
  - Significant improvement achieved as assessed by HAQ
- **QoL**
  - Significant improvements in SF-36, PsAQoL, DLQI, EQ-5D
- **Fatigue**
  - Significant improvement observed (eg, FACIT)

MASES = Maastricht Enthesitis Index; SPARCC = Spondyloarthritis Research Consortium of Canada; PsAQoL = PsA quality of life; DLQI = Dermatology Life Quality Index; EQ-5D = EuroQoL 5-domain; FACIT = Functional Assessment of Chronic Illness Therapy.

Mease PJ. *Ann Rheum Dis*. 2011;70(1):i77-i84. Mease PJ. *Arthritis Care Res (Hoboken)*. 2011;63(11):S64-S85.

21

## Current and Novel Treatment Options for PsA Treatment

22

23

24

## CLEAR Study: Secukinumab (aIL-17A) vs Ustekinumab (aIL-12/23) in Psoriasis

Missing data were imputed as nonresponse; only response-evaluable patients were included.  
 \* $P < 0.0001$ ; \*\* $P = 0.0001$ ; † $P < 0.001$ ; ‡ $P < 0.05$   
 Thaci D, et al. *JAAD*. 2015;73(3):400-409.

25

## Secukinumab: Adverse Events

Common Adverse Events <sup>1</sup>			
	SEC 300 mg	SEC 150 mg	Placebo
URTI	4 (4%)	8 (8%)	7 (7%)
Nasopharyngitis	6 (6%)	4 (4%)	8 (8%)
Diarrhea	2 (2%)	2 (2%)	3 (3%)
Headache	7 (7%)	4 (4%)	4 (4%)
Nausea	3 (3%)	4 (4%)	4 (4%)
Sinusitis	1 (1%)	2 (2%)	1 (1%)
Psoriatic arthropathy	0	3 (3%)	2 (2%)
Urinary tract infection	2 (2%)	4 (4%)	4 (4%)
Hematuria	2 (2%)	3 (3%)	1 (1%)
Vomiting	2 (2%)	2 (2%)	1 (1%)

**Warnings<sup>2</sup>**

1. Infection
2. Tuberculosis
3. Hypersensitivity reactions
- 4. New or worsening inflammatory bowel disease**

URTI = upper respiratory tract infection.

1. McInnes IB, et al. *Lancet*. 2015;386:1137-1146. 2. Secukinumab (Cosentyx®) PI 2017 ([www.pharma.us.novartis.com/sites/www.pharma.us.novartis.com/files/cosentyx.pdf](http://www.pharma.us.novartis.com/sites/www.pharma.us.novartis.com/files/cosentyx.pdf)).

26

## SPIRIT-P2: Ixekizumab in Patients with Active PsA and an Inadequate Response to TNFi

Both the 2-week and 4-week ixekizumab dosing regimens improved the signs and symptoms of patients with active PsA who had an inadequate response to TNFi therapy.

\* $P < 0.0001$  vs placebo

IXE = ixekizumab.

Nash P, et al. *Lancet*. 2017;389:2317-2327.

27

## Ixekizumab vs Adalimumab for PsA

- Randomized, double-blind placebo-controlled trial in patients who were biologic DMARD naïve
- More patients achieved an ACR20 response with IXE Q2W (62.1%) or IXE Q4W (57.9%) than placebo (30.2%)
- Disease activity and functional disability were significantly improved with ixekizumab vs placebo ( $P < .01$ ), and there was significantly less progression of structural damage at week 24 with ixekizumab ( $P < .01$ )

**Conclusion: Ixekizumab and adalimumab were both equally better than placebo in PsA. Ixekizumab was better than adalimumab for psoriasis.**

Mease P, et al. *Ann Rheum Dis*. 2017;76:79-87.

28

## SPiRiT H2H: Head-to-Head Comparison of Ixekizumab and Adalimumab

- Ixekizumab was superior to adalimumab in achievement of simultaneous improvement in joint and skin disease (ACR50 and PASI 100) in patients with active PsA and inadequate response to csDMARDs
- Ixekizumab was non-inferior to adalimumab for ACR50 response (IXE: 51%, ADA: 47%) but superior for PASI 100 response (IXE: 60%, ADA: 47%,  $P = .001$ )

Mease PJ, et al. *Ann Rheum Dis.* 2020;79:123-131.

csDMARD = conventional synthetic DMARD

29

## Ixekizumab: Adverse Events

Ixekizumab Adverse Events		
	IXE 80 mg (n=1167)	Placebo (n=791)
Injection site reactions	196 (17%)	26 (3%)
Upper respiratory tract infections	163 (14%)	101 (13%)
Nausea	23 (2%)	5 (1%)
Tinea infections	17 (2%)	1 (<1%)

Adverse events occurring in  $\geq 1\%$  of IXE group, and more frequently than placebo.

### Warnings

1. Infection
2. Tuberculosis
3. Hypersensitivity reactions
4. Inflammatory bowel disease

Ixekizumab (Taltz®) prescribing information (<https://pi.lilly.com/us/taltz-uspi.pdf>)

30

# Current and Novel Treatment Options for PsA Treatment

Adapted from Nestle FO et al. *N Engl J Med.* 2009;361:496-509. Kopf M et al. *Nat Rev Drug Discov.* 2010;9:703-718. Garber K. *Nat Biotechnol.* 2011;29:563-566. Thanks to Iain McInnes.

31

## Ustekinumab: Efficacy in PsA

UST = ustekinumab.  
McInnes IB et al. *Lancet.* 2013;382:780-789. Ritchlin C et al. *Ann Rheum Dis.* 2014;73:990-999.

32

## Ustekinumab Is Effective in PsA

### 24-Week DBRCT

(PBO: n = 206; UST: n = 205; 45 mg IV at 0, 4, and every 12 weeks)

McInnes IB, et al. *Ann Rheum Dis.* 2012;71(3):107. McInnes I. *Lancet.* 2013;382:780-789.

33

## Ustekinumab Adverse Events

- Meta-analysis of 9626 patients in 30 RCT of 16 weeks duration
- AEs and SAEs include infections, cough, headache, upper respiratory tract infection, nausea, injection site reactions, CV event, cancer, and death

Adverse events	UST	Placebo	P value
Infections	1210 (19.7%)	588 (17.1%)	<0.01
Nasopharyngitis	318 (5.2%)	162 (4.7%)	0.31
Cough	21 (2.3%)	25 (4.8%)	0.01
Upper respiratory tract infection	150 (3.2%)	201 (7.1%)	<0.001
Nausea	113 (4.8%)	58 (5.0%)	0.80
Headache	302 (6.1%)	141 (5.1%)	0.06
Infusion/Injection site reaction	149 (3.9%)	44 (2.0%)	<0.001
Malignancy	3 (0.1%)	5 (0.2%)	0.16
Death	5 (0.1%)	1 (0.1%)	0.43
CV	7 (0.2%)	4 (0.2%)	1.00

34

## DISCOVER-1 Trial of Guselkumab

- Phase 3, placebo-controlled trial of guselkumab in 381 patients with active PsA who were biologic-naïve or had previously received a TNFi
- 31% of patients had been previously treated with  $\leq 2$  TNFi agents

	Guselkumab 100 mg		Placebo
	Q4W	Q8W	
Number of patients	128	127	126
ACR20 response at week 24, n/N (%)			
Patients with prior TNFi use	22/38 (57.9%)	23/41 (56.1%)	7/39 (17.9%)
% difference vs. placebo (95% CI)	40.0 (20.8, 59.2)	38.5 (19.3, 57.7)	
Unadjusted p value	<0.001	<0.001	
Patients with inadequate response to prior TNFi	11/17 (64.7%)	9/15 (60.0%)	3/12 (25.0%)
% difference vs. placebo (95% CI)	42.4 (11.0, 73.9)	35.9 (0.8, 71.0)	
Unadjusted p value	<0.001	<0.001	
Patients without prior TNFi use	54/90 (60.0%)	43/86 (50.0%)	21/87 (24.1%)
% difference vs. placebo (95% CI)	35.9 (22.3, 49.4)	25.9 (12.0, 39.7)	
Unadjusted p value	<0.001	<0.001	

- ACR20 at week 24 was achieved by significantly greater proportions of patients in the guselkumab Q4W (59%) and Q8W (52%) groups than in the placebo group (22%)

Deodhar A, et al. *Lancet*. 2020;395:1115-1125.

35

## DISCOVER-2 Trial of Guselkumab

- Phase 3 trial of 741 biologic-naïve patients with active PsA
- Patients randomized to guselkumab Q4W, Q8W, or placebo

- Significantly greater proportions of patients in the guselkumab Q4W (64%) and Q8W (64%) groups achieved ACR20 at week 24 than placebo (33%)

Mease PJ, et al. *Lancet*. 2020;395:1126-1136.

36

## Guselkumab Adverse Events

	PBO	GUS	
		100 mg Q8W	100 mg Q4W
Patients with $\geq 1$ AE (%)	60%	54%	55%
SAE (%)	4%	3%	0%
Discontinuation due to AE (%)	2%	2%	1%
Infections (%)	25%	26%	24%
Alanine aminotransferase increase	2%	6%	4%
Aspartate aminotransferase increase	2%	7%	2%
Nasopharyngitis	6%	13%	5%
Upper respiratory tract infection	6%	6%	9%

Deodhar A, et al. *Lancet*. 2020;395:1115-1125.

37

## Current and Novel Treatment Options for PsA Treatment

38

## Efficacy of Tofacitinib in PSA

- 395 patients with active PsA and an inadequate response to TNFi were randomized to:
  - Tofacitinib 5 mg BID
  - Tofacitinib 10 mg BID
  - Placebo, with a switch to 5 mg or 10 mg tofacitinib BID at 3 months
- No efficacy noted on Leeds Enthesitis Index, Dactylitis Severity Score, FACIT-F total score, and SF-36 physical functioning

**Conclusion: Tofacitinib has some efficacy in PsA, but no efficacy noted in some symptoms**

Gladman D, et al. *N Eng J Med.* 2017;377:1525-1536.

39

## Adverse Events in 3118 Patient-Years in Tofacitinib Open-Label, Long-Term Extension Study of Therapy for RA\*

\*No dose breakdown; 3227 pts in Treatment Emergent AEs

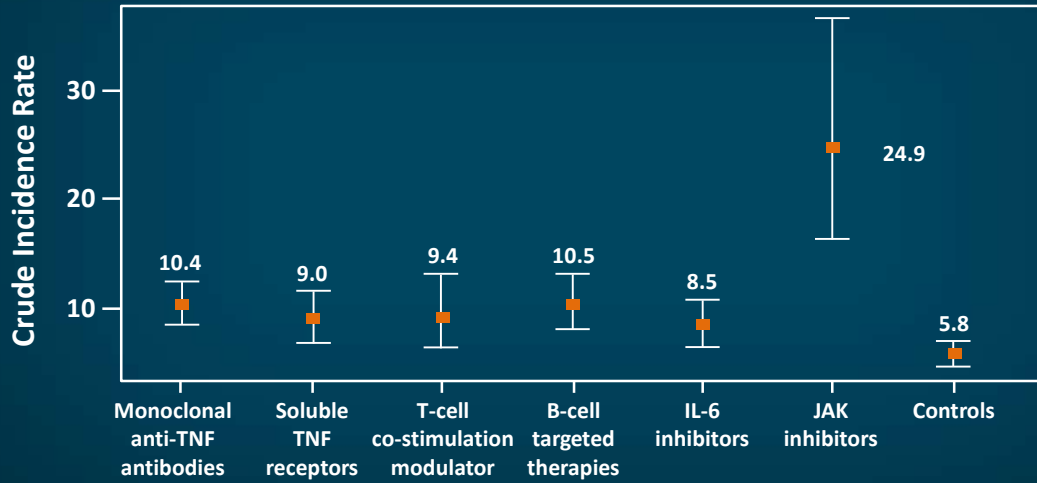

GI = gastrointestinal disorders; MSK = musculoskeletal and connective tissue disorders; Inf = infections; HGB = decreased hemoglobin; AST/ALT = aspartate/alanine; ANC = absolute neutrophil count.

Wollenhaupt J, et al. *ACR* 2011. Abstract 407.

40

## Incident Rates of Herpes Zoster in RA Patients

Strangfeld A, et al. EULAR 2020. Abstract OP0238.

41

## Current and Novel Treatment Options for PsA Treatment

Adapted from Nestle FO et al. *N Engl J Med.* 2009;361:496-509. Kopf M et al. *Nat Rev Drug Discov.* 2010;9:703-718. Garber K. *Nat Biotechnol.* 2011;29:563-566. Thanks to Iain McInnes.

42

## Apremilast in PsA: PALACE 1, 2, and 3

### Primary endpoint across studies: ACR20 response at week 16

ITT population (NRI)

Placebo Corrected Reso: 15-23% (16 wks)

\*P<0.05; §P<0.005; ‡P<0.0001 vs placebo.  
NRI = non-responder imputation

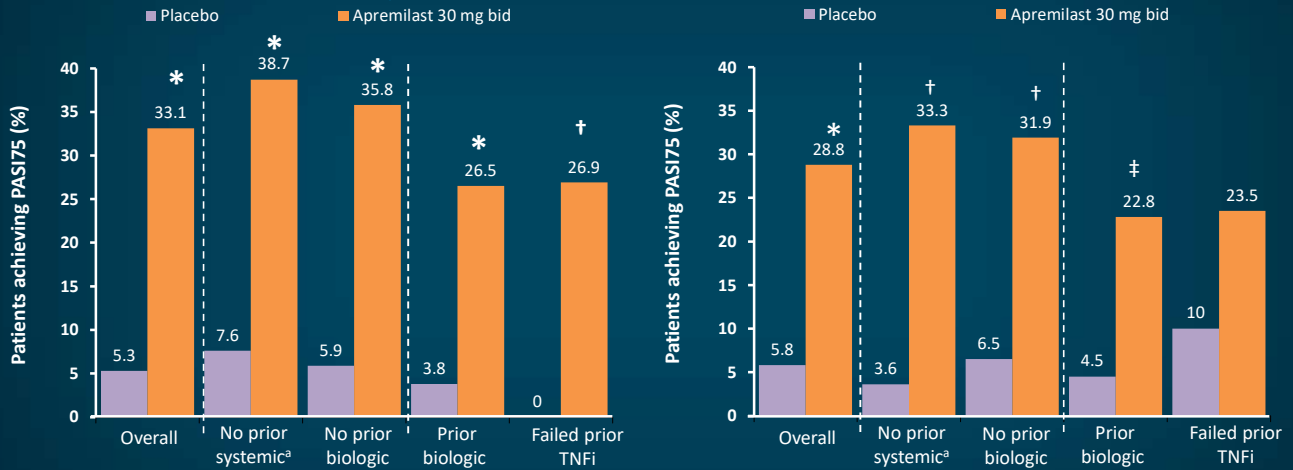

Kavanaugh A, et al. *Ann Rheum Dis.* 2014;73:1020-1026. Cutolo M, et al. *J Rheumatol.* 2016;43:1724-1734. Edwards CJ, et al. *Ann Rheum Dis.* 2016;75:1065-1073.

43

## Apremilast in Moderate-to-Severe Psoriasis

ESTEEM 1: PASI75 by prior treatment at week 16 (LOCF, full analysis set; N = 844)

ESTEEM 2: PASI75 by prior treatment at Week 16 (LOCF, full analysis set; N = 411)

\*P<0.0001; †P=0.0273 vs PBO; <sup>a</sup>Conventional ± biologics

\*P<0.0001; †P<0.001, ‡P=0.0069 vs PBO

LOCF = last observation carried forward.

Paul C et al. *J Am Acad Dermatol.* 2014;70(5):AB164 (abstract P8412). Papp K et al. *J Am Acad Dermatol.* 2015;73:37-49. Reich K et al. *AAD 2013, Late breaker.*  
Paul C et al. *Br J Dermatol.* 2015;173:1387-1399.

44

## Apremilast Effects on Enthesitis and Dactylitis

Data pooled from PALACE 1–3, week 24

Gladman DD, et al. *Arthritis Rheum.* 2013;65(10 suppl): S347 (abstract 816).

45

## PALACE 2: 52-Week Safety of Apremilast<sup>1</sup>

Adverse Events	Placebo (N = 159)	APR 30 BID (24 weeks) (N = 162)	APR 30 BID (52 weeks) (N = 234)
Diarrhea	8 (5.0)	24 (14.8)	32 (13.7)
Nausea	3 (1.9)	26 (16.0)	32 (13.7)
Headache	7 (4.4)	19 (11.7)	23 (9.8)
URTI	6 (3.8)	11 (6.8)	22 (9.4)
Nasopharyngitis	6 (3.8)	8 (4.9)	10 (4.3)
Hypertension	7 (4.4)	5 (3.1)	13 (5.6)
<b>Laboratory values</b>			
ALT >150 u/L	1/158 (0.6)	2/160 (1.3)	3/230 (1.3)
Creatinine elevation	0/158 (0.0)	1/160 (0.6)	2/230 (0.9)

### Warnings for<sup>2</sup>:

1. Depression and suicidal behavior
2. Weight loss

APR = apremilast; ALT = alanine aminotransferase.

1. Cutolo M, et al. *J Rheumatol.* 2016;43:1724-1734. 2. Apremilast (Otezla<sup>®</sup>) PI (<http://media.celgene.com/content/uploads/otezla-pi.pdf>).

# Current and Novel Treatment Options for PsA Treatment

Adapted from Nestle FO et al. *N Engl J Med.* 2009;361:496-509. Kopf M et al. *Nat Rev Drug Discov.* 2010;9:703-718. Garber K. *Nat Biotechnol.* 2011;29:563-566. Thanks to Iain McInnes.

47

## Abatacept: Phase III Trial

ABT = abatacept.

Mease PJ, et al. *Ann Rheum Dis.* 2017;76:1550-1558.

48

## Summary

- Pharmacologic treatment of PsA is only 1 part of the picture. Other factors to consider include:
- **Patient goals**
  - Improve quality of life, function, and social participation
  - Control symptoms and inflammation (enthesitis, dactylitis, joint pain)
  - Prevent joint damage
- Starting treatment early
- Minimizing associated comorbidities.
- Multidisciplinary care:
  - Physical therapy, occupational therapy, management of comorbidities by dermatologists, endocrinologists, cardiologists, etc.

Perez-Chada LM, et al. *Clin Immunol.* 2020;108397.

49

## Case Study

Treatment-naïve Patient

50

## Case Study: Treatment-naïve Patient

- 48-year old man presents with 8 months of pain in bilateral 5 DIPs, left knee, and left ankle
  - He has pain in his right Achilles insertion and just below the right elbow on pressure, indicative of enthesitis
  - His left knee is swollen
  - CDAI: 16
- He has a five year history of psoriasis
  - Plaques found on his scalp, shins, elbows (PASI: 9)
  - Pitting nails
  - Moderate lower back pain

CDAI = Clinical Disease Activity Index; DIP = distal interphalangeal

51

## Case Study: Treatment-naïve Patient

- CBC and CMP are normal
- ESR = 22 mm/hr
- MRI reveals sacroiliac erosions on the left and some classical psoriatic DIP erosions

***How would you manage this patient?***

CBC = complete blood count; CMP = comprehensive metabolic panel; ESR = erythrocyte sedimentation rate; MRI = magnetic resonance imaging.

52

## COVID-19 Exposure

- The patient reports that his wife tested positive for COVID-19 yesterday

- How would you manage this patient's PsA given his exposure to SARS-CoV-2?**

Treatment of Rheumatic Disease During the COVID-19 Pandemic <sup>8</sup>	
Treatment of Rheumatic Disease in the Absence of COVID-19 Infection or Exposure	
HCQ/CQ, SSZ, MTX, LEF, immunosuppressants (tacrolimus, CSA, MMF, AZA), biologics, JAK inhibitors, NSAIDs	Continue therapy
Low-dose corticosteroids	May be started if clinically indicated (<10 mg prednisone equivalent/day)
Following SARS-CoV-2 Exposure	
HCQ/CQ, SSZ, NSAIDs	May be continued
Immunosuppressants (tacrolimus, CSA, MMF, AZA), non-IL-6 biologics, JAK inhibitors	Stop therapy temporarily, pending a negative COVID-19 test or 2 weeks of symptom-free observation
IL-6 inhibitors	May be continued in select circumstances
Documented or presumptive COVID-19	
HCQ/CQ	May be continued
SSZ, MTX, LEF, immunosuppressants, non-IL-6 biologics, and JAK inhibitors	Withhold or stop therapy
NSAIDs	Should be stopped in patients with severe respiratory symptoms

Mikuls TR, et al. *Arthritis Rheumatol.* 2020;72:1241-1251.

53

## Conclusions

- For treatment-naïve patients, TNFi inhibitor is preferred over OSMs, IL-17i, and IL-12/23i unless:
  - Patient has severe psoriasis, or
  - Contraindications to TNFi, including congestive heart failure, previous serious infections, recurrent infections, or demyelinating disease

- CSA is effective for the skin with some expected toxicities
- MTX does not affect DMARD measures but does help with some symptoms

Singh JA, et al. *Arthritis Rheumatol.* 2019;71:5-32.

54

## Case Study

### Inflammatory Bowel Disease

55

### Initial Presentation

- 55-year old woman reports worsening pain and stiffness in her fingers, ankle pain, and swelling of her finger and elbow
- Physical exam:
  - Tenderness in right 3 DIPs, bilateral 4 PIPs
  - Dactylitis of right finger
  - Left elbow swollen and tender
  - Right ankle swollen with enthesitis present
  - CDAI: 20
- Plaque psoriasis present on elbows, forearms, trunk and scalp
  - Scaling with minor fissures. PASI:12

56

## History of Present Illness

- PMH: hypertension, type 2 diabetes, obesity
- Diagnosed with psoriasis 8 years ago and PsA 1 year ago
- Initially managed with methotrexate (15 mg/week) and short course of prednisone
  - Elevated AST and ALT 2 months after starting methotrexate
- Patient switched to cyclosporine A
  - She complained of worsening symptoms with DAS28 of 5.8 and PASI of 11
  - Cyclosporine discontinued
- Patient is currently taking etanercept 50 mg/week

57

## Lab Results

Lab	Results	Normal Range
Hemoglobin	13 g/dL	12.0-15.5 g/dL
WBC	6800 cells/ $\mu$ L	4500-11,000 cells/ $\mu$ L
ESR	<b>27 mm/hr</b>	0-22 mm/hr
RF	9 IU/mL	0-20 IU/mL
CCP	12 u/mL	0-20 u/mL
CRP	<b>70 mg/L</b>	<10 mg/L
HbA1c	7.1%	<5.7%

**How would you manage this patient?**

58

- Patient is switched from etanercept to ixekizumab
  - She reports a significant decrease in tenderness and swelling of fingers and elbow
  - Resolution of dactylitis
  - Psoriatic skin lesions disappeared
  - CRP falls from 70 to 15 mg/L
- 6 months later, the patient complains of abdominal pain and frequent episodes of diarrhea
  - The patient is referred to a gastroenterologist and is diagnosed with Crohn's disease

**How would you manage this patient?**

59

## Conclusions

- Crohn's disease and ulcerative colitis, including exacerbations, occurred during clinical trials of IL-17 inhibitors. Monitor for inflammatory bowel disease with secukinumab or ixekizumab. Initiate appropriate medical management if IBD develops.
- FDA-approved medications for IBD include:
  - Crohn's disease: adalimumab, infliximab, ustekinumab, and certolizumab pegol
  - Ulcerative colitis: adalimumab, infliximab, ustekinumab, and golimumab
